Fine Arts.

EXHIBITION OF FINE ARTS AT BORDEAUX.—The provincial exhibitions become more important every day. That of Bordeaux has long held a prominent place amongst its rivals, and the present, its seventeenth exhibition, is superior to any that have preceded it. The number of works exhibited is 635, and they include specimens of some of the best living French painters, and of some lately deceased artists; amongst the latter is the "Source," by Ingres, the property of the Countess Duchâtel. The purchases amount to £3,200, besides two works bought for the museum of Bordeaux, of which the price is not given. The works which have found purchasers are of all classes—paintings by Duverger, Lanlelle, Ribot, Antigna, Bonheur, Bourgeois, Chaplin, Paul Flandrin, Philéppoteaux, and many other well-known artists, and sculpture and bronzes by such artists as Carpeaux, Carrier, Belleuse, and Paul Dubois. With such provincial markets as this and others open to the artists of France, it is no wonder that the annual exhibition in Paris becomes more crowded every year, for the admission to the latter is alone a passport to the exhibitions of the provinces.

GHEENT TRIENNIAL EXHIBITION OF FINE ARTS.—This important exhibition is announced to take place in September, in the new hall of the Casino, recently erected specially for exhibitions. All kinds of works of art are admissible, provided they are the productions of living artists; but, from the title "National Exhibition," it would appear to be confined exclusively to Belgian exhibitors. The exhibition is to open on the 13th of September and close on the 2nd of November.

Manufactures.

THE COTTON MANUFACTURE IN SWITZERLAND.—One of the most important industries in Switzerland is the spinning and weaving of cotton. Spinning is chiefly carried on in the eastern part of Switzerland. The total number of spindles in all the establishments amounts to 1,600,000, of which 607,082 spindles are in 78 establishments in the canton of Zurich; 266,805 in 22 establishments in the canton of Argovie; 200,000 in 12 establishments in the canton of Glaris; 172,136 in 20 establishments in the canton of S. Gallo; 109,800 in 4 establishments in the canton of Zug; 50,400 in Svitto; 42,800 in Turgovie; 31,600 in the Grisons; 30,000 in Bern; 22,768 in Soletta; 10,000 in the canton of Bâle; 16,120 in Scaffhausen; and 6,016 in the canton of Lucern. The total number of workpeople employed in this manufacture is about 15,400, and adding the number of managers, the clerks, and other employes, and the families of the workpeople, about 30,000 persons may be said to depend on this industry for their livelihood. The annual production of the spinning-mills in Switzerland is estimated at 338,630 quintals. In 1857, the exports of cotton-yarn was 18,504 quintals against 4,818 imports; in 1863, 53,836 quintals exports against 47,475 quintals imports; and in 1866, 35,738 quintals ex-

ports against 16,686 imports. This decrease must not be attributed to a smaller production, for during the years 1864, 1865, and 1866, the imports of raw cotton and the exports of cotton goods had largely increased; it should rather be attributed to the greater development of the cotton weaving during the last few years in Switzerland, which has tended to augment the consumption of cotton-yarn, and for this reason a greater quantity has been imported.

Commerce.

THE CORAL FISHERY on the Italian coasts is giving satisfactory results, and this industry annually acquires greater importance. The greater part of the boats employed in this fishery are Italian, and they take to Genoa, Leghorn, and Naples, their produce, which forms one of the principal branches of the trade of the peninsula. These boats are of two distinct kinds:—One kind, by far the most numerous, is composed of vessels of from 11 to 16 tons burden, with crews of 12 or 14 men each. They are all fitted out at Terre del Greco, under the Italian flag, and fish during the months of February and March. The second kind includes crafts from three to six tons burden, under the French flag, although they are almost entirely manned by Italian seamen. Their crews consist of five or six men, and they remain at sea all the year. The boats fish on the coast of Africa and Sardinia, at a distance of fifteen, twenty, or even thirty miles from shore, only returning to port in case of absolute necessity. They work day and night without intermission; half of the crew relieve the other half every six hours. They remain at sea in this way for several months, and their fare during that time consists of biscuits and macaroni. The number of the smaller kind of craft appear to have diminished during the last few years. Last year there were only twenty-seven; but, to make up for this, the number of the larger kind of vessels increases daily; they may be estimated on the average at 100, their crews amounting in all to about 1,200 men. In 1866 there were 120, and, though there was a diminution last year, it is calculated that in 1868 there will not be less than 200. The value of coral constantly varies; the lowest price is 75 francs the kilogramme. In 1867 it was only 60 francs; sometimes it is worth 100 francs. The differences of price is due in a degree to the different qualities of the coral; they arise also most frequently from special circumstances, which the markets of distant countries cause, the sale of coral being much smaller in Europe than elsewhere.

Colonies.

VICTORIAN RAILWAYS.—The revenue of the government line of railways in Victoria continues steadily to increase. The total receipts up to the 19th March were £124,810 17s., against £119,870 15s. 6d. for the corresponding period of last year, making an increase of £4,940 1s. 6d. The following is a list of the revenue of the Victorian railways during February:—

	Passengers.	Goods.	Total.
	£	£	£
Murray River Line ..	8,710	15,751	24,462
Williamstown Line ..	1,086	1,140	2,227
Ballarat Line.....	9,069	10,008	19,077
	£18,865	£26,899	£45,766

REVENUE OF NEW SOUTH WALES.—When responsible government commenced in this colony there was a deficit of £150,000. Seven years thereafter it had grown to £400,000. In the eighth year it had increased to

\$800,000. New taxes were then imposed to the amount of £300,000 per annum, for the purpose of providing for the deficiency of £800,000, which it was thought might be met in three years. During the first two years, however, £450,000 of the new taxes were expended for various purposes other than that of meeting the deficiency, leaving in the treasury only £150,000 of the new taxes. The treasurer holds that, with this sum of £150,000, his ways and means will be sufficient without additional taxation.

Notes.

THE SUEZ CANAL.—In a recent number of the *Revue Contemporaine* will be found an article, by M. Amedée Marhean, in which he examines the advantages and drawbacks the passage of the Suez Canal may offer. If distance only were taken into account there could be no question about it; but, unfortunately, there are meteorological considerations, which render the new route difficult for sailing vessels. The winds of the Mediterranean and Red Sea, though favourable from March to October, will be the contrary during the winter season, for the out passage to India. The opposite will be the case for home-bound vessels. It has been calculated that at present the average time required for the Cape of Good Hope, starting for Cape Lizard, is in the summer 106 days for Ceylon; 107 days for Singapore; and 102 for the Straits of Sunda. By the Suez Canal, these figures will be respectively 55, 77, and 70. But by doubling the Cape the vessel saves 10 frs. per ton it would have had to pay in going by the canal, which, for a ship of 650 tons, makes a saving of 6,500 frs. Now the daily expenses of a sailing-vessel of that burden being 340 frs., the above sum would represent 19 days navigation, a difference to be taken into account in calculating the relative advantages of the two routes. It will be found, that during the winter season, the advantages offered by the out passage are, owing to the monsoon, much smaller than in the summer. For Java no time will be gained either way, and for Ceylon there will be an actual loss of 11 days by Suez. Nevertheless, deducting from the above 19 days, the vessels going by the shorter route will still have arrived a week sooner than those which have doubled the Cape, and will be able to forestall the competitors in the market, if, as is usually the case, that be an object. But if, instead of a sailing-vessel, the craft be a mixed one, say of 1,600 tons, matters will assume a different aspect. The voyage by the Cape will be 77, 75, and 71 days respectively. By the Canal, 43, 54, and 53; the 16,000 frs. for the tonnage dues will only represent 16 days' navigation, at the rate of 1,000 francs per day, so that whether in winter or summer such a ship will always be a gainer by taking the Suez route.

DATE PUDDING.—The *Produce Markets Review* says:—"Many grocers find a difficulty in disposing of any except the finest qualities of dates, but we are told on good authority, that even the lowest kinds may be made very palatable by converting them into what is called the Palmyra or date pudding, for which the following is the receipt:—1 lb. of dates, chopped fine; 1 lb. of flour; $\frac{1}{2}$ lb. of suet; $\frac{1}{4}$ lb. of moist sugar. Mix all well together, and moisten with a little milk, boil in a basin or cloth for three hours, or bake slowly for two hours. These quantities make a large pudding."

THE ELECTRIC TELEGRAPH.—M. Neumann, in the Austrian report of the Paris Universal Exhibition in 1867, states that the telegraphic lines in the whole world are 49,255 geographical miles long; there are in Europe 8,000 offices, and 4,000 in the other continents. It has been necessary to employ for the conducting wires 1,300,000 cwt. of iron; the expense of establishing all the lines is estimated at 416,000,000 francs.

Correspondence.

ARTIFICIAL INCUBATION.—SIR,—My attention having been called to the evidence of Mr. George Brooke, relative to the subject of hatching poultry by steam, as given before the Food Committee on the 13th of May last, and published in your issue of the 5th of June, I would very respectfully beg the favour of making a few remarks in reply. Mr. Brooke has evidently been misinformed on the subject, or has not given the personal attention to the matter which it deserves. Mr. Brooke is entirely in error. In the first place, I have birds alive which have been hatched and reared without hens, and they are strong, healthy, and fat. By artificial incubation birds may be hatched out to the extent of from 50 even up to 100 per cent. The birds so hatched are reared without hens, and the larger per centage, with care and attention, live to become full-grown fowls. The generality of birds so hatched and reared are perfect in form, and not the subjects of malformations and defects. The eggs from birds hatched and reared by steam are fertile, the same as if hatched and reared by hens. I have birds now alive the eggs from which they were hatched being laid by birds I had previously hatched and reared by steam. That a great deal of prejudice and opposition will have to be overcome before artificial incubation will be even tolerated in England, I feel very likely to be the case; but if gentlemen of standing and influence will only give a thought and some little attention to the subject, my conviction is that, eventually, it will hold its own against all opponents. We may not contravene nature, but we may imitate her; and if the science of artificial incubation is all problematical and a myth, how can we reconcile the fact that the art has been carried out in Egypt for the last 4,000 years up to the present time, and in China for very many years. I write these few lines in the interest of the many, although I may, from personal motives (being a manufacturer of hatching machines) be supposed to be actuated by mercenary motives only; but I shall be happy to afford to you, or any gentleman who may feel an interest in the subject, practical evidence that what I have stated is fact, from letters I have received and from the actual exhibition of birds which are now living.—I am, &c.,—WILLIAM H. THICK.
